GO FOR IT

# IT'S TIME TO TAKE A NEW STEP

We have come a long way, but today a new journey begins. A bold step, looking to the future without forgetting who we are: the Giasco rebranding is the synthesis of years of experience, innovation, and vision. Now is the time to go further. Now is the time to say: **GO FOR IT.**

**Agile, fast, free:** the squirrel is the symbol of our approach to safety. Giasco shoes are designed to move with ease in any environment — from work to leisure — without compromise between protection and style.

**Go for it** is our call to action: to choose, to dare, to move Forward. With shoes that give you the courage and confidence to take the first step and live every situation with the same naturalness and trust... wherever you are heading.

*Giasco Team*

# WHAT MAKES US GIASCO

## INNOVATION

Innovation is our natural instinct. We look at every project with fresh eyes, even when we've been doing it for generations, and we always start from the same question: how can we do it better?

The patented **THREE TO BE™** sole is the result of years of research: three layers of polyurethane injected together to ensure comfort, stability, and maximum grip. A concrete evolution, designed for those who never settle.

## DESIGN

A work shoe can also be a shoe that tells the story of who you are.

For us, design means this: creating something that makes you feel comfortable wherever you are. On the construction site, of course. But also at the bar, in the city, in your real life.

We push our footwear beyond just a technical product to offer you an extension of your style, of your way of being. Because comfort is not only in the materials... it's in the way you move through the world.

## RELIABILITY

Reliability is measured in critical moments. When what you need is an answer, not a procedure. A person, not a call center.

That's why we've eliminated all unnecessary bureaucracy and endless waiting times, so we can guarantee fast, effective advice and support.

We are a company made of people who listen, decide, and act. If you need an answer, you'll find it. And it will come quickly.

## THE FRESHNESS OF A YOUNG, DYNAMIC AND INTERNATIONAL COMPANY

United in diversity and strong enthusiasm in producing **safety shoes**, we propose us on the national and international market, with our brand.

GIASCO offers certified products for the protection and wellness of the foot. Our goal is to provide our dealers shoes forefront in terms of technology and comfort, capable of providing workers with full protection from all the dangers present in the various work situations, thus ensuring complete security.

We always pay attention to ethics, design, technology and innovation; we work actively to guarantee the complete **satisfaction** of the customer.

It is precisely, the quality of the product offered, the extreme attention to care and the efficiency and timeliness of services that allow us today to be among the industry leaders in more than 90 countries. However, our commitment has always been to fulfill complete satisfaction with the expectations of all our stakeholders.

So in addition to retailers, we refer to the employees, the territory, the suppliers, the environment and the general society in which we live.

This in order to promote a **sustainable business** and always ensure the best of all those who make up the team Giasco. For this, a special thanks to them, because thanks their confidence in us, they allowed us from 1971 to the present, to not only grow and reach more and more goals, but most of all to be able to continue to operate with the enthusiasm that has always characterized us.

## 1971 FOUNDATION

The great dedication of our entire team, our collaborators, the community, our suppliers, the environment, and society at large, as well as everyone who is part of the Giasco team, has allowed us **since 1971**, the year of our founding, not only to grow and achieve ever-greater goals, but above all to continue to operate with the utmost enthusiasm.

**With enthusiasm and pride**, both internationally and locally.

## 1998 CERTIFIED SYSTEM ISO 9001

We believe that **quality is an essential and fundamental value**, and that continuous improvement is a key factor for our company and an indispensable tool for facing market challenges.

For this reason we constantly monitor, evaluate and improve each step of the **entire value chain**.

CHOOSE YOUR LANGUAGE

# >90

## COUNTRIES ALL OVER THE WORLD

Giasco quality is recognized worldwide; our service, efficiency, speed, and punctuality have made us industry leaders in over 90 countries. Our products are now distributed **worldwide**, through a **network of dealers**, specialized in selling safety products.

We believe that only a constant and widespread presence in the territory can guarantee to the customer the **best service and maximum satisfaction**.

## LAYERS OF TECHNOLOGY

Giasco's exclusive **THREE TO BE™** **patented Triple Injection sole** allows us to pursue our most important goal: creating safety footwear that combines **comfort, stability and protection**.

A concentration of technology, innovation, and **style** that guarantees well-being and safety in any environment and under any working condition.

# THREE TO BE™ HEROES

**THREE TO BE™** is a **patented revolutionary technology** that allows us to offer the only shoe with 3 different layers of polyurethane injected on the upper.

The aim of this product is to offer **Safety**, maximum **Comfort** and Secure foot **stability** thanks to the 3 densities that characterize the various layers of the sole.

## COMFORT

The three different densities cushion every step, absorb shocks, and reduce fatigue even during prolonged use. It's the most comfortable shoe around!

## STABILITY

Greater grip on the ground, better energy distribution. Exceptional support and traction protect the joints and reduce the risk of injuries.

## ANTISLIP

The outsole features a technology that minimizes slipping, protects against perforations, and ensures excellent abrasion resistance.

# WE ARE NOT MADE IN ITALY BUT.

## OUR SAFETY SHOES ARE DESIGNED, CREATED, AND MANUFACTURED IN OUR COMPANY

- shape directly within our company, located in ITALY.
- **Headquarter is located in Chiampo, heart of one of the most renowned leather production districts in the world, the Veneto Leather District.**
- Only uppers construction takes place outside (Romania and Tunisia).

**1****ITALY**

Product design  
and prototyping

**2****ITALY**

Reception and  
control of raw materials

**3****EU/EXTRA**

Upper  
construction

## WHAT COUNTRY IS LISTED ON THE MADE IN LABEL?

- The EU Customs Code (**EU Regulation 952/2013**) specifies that the **origin of footwear must be identified as the country where construction of the uppers are made** (if already primary sole attached).
- Therefore, although GIASCO carries out most of the production process and investment in Italy, with key personnel and technologies at its headquarters in Chiampo (VI), the product is labeled with a country other than Italy, in compliance with the applicable regulations.
- We are still confident that the quality and technology inherent in GIASCO safety footwear are clearly communicated when the product is worn by the consumer.
- In 2024 GIASCO decided to ask the Customs and Monopolies Agency for a technical-legal opinion on the origin of the footwear.
- The Agency analyzed the product and GIASCO's production process, and agency confirmed the philosophy that "made in" labels must show the country where the production of the uppers, complete with insole, is carried out.

## BEWARE OF FALSE MADE IN LABELS

- The production of footwear from foreign semi-finished products, as mentioned above, is widely practiced.
- On shelves quite often products bears labels such as MADE IN ITALY/MADE IN GERMANY/MADE IN FRANCE, which may conceal the actual origin, which, if correctly identified, should be associated with countries such as China, India, Romania, Tunisia, Brazil, Vietnam, etc.
- GIASCO is committed to maintaining communication that is **respectful of the law and transparent**.
- We recommend that distributors and retailers carefully check the origin of the products on their shelves.

**ESD= ELECTRO STATIC DISCHARGE**  
**(IEC 61340-4-3:2017/IEC 61340-5-1:2016)**

Static electricity can be defined as the excess or deficiency of electrons on the surface of a body, which is normally neutral. A charged electro static body tends to discharge the static electricity, creating phenomena which can damage or disturb sensible devices.

ESD shoes work for dissipating this electro static charge cumulated in the human body.

They satisfy requirements from norms IEC 61340-4-3:2017 (IEC 61340-5-1:2016) for electrical resistance ESD. Dissipative features of these shoes may be considerably modified by bending, contamination, dump of important temperature range and they will not perform their function if worn in wet places.

We suggest to the user to make regular tests for dissipative features of the working place.

CONDUCTIVE	from 0 MΩ to 0,1 MΩ	ANTISTATIC	from 0,1 MΩ to 1000 MΩ
ESD	from 0,1 MΩ to 100 MΩ	DIELECTRIC	from 1000 MΩ

**DGUV 112-191 (EX BGR 191)**

German Regulation of safety shoes concerning orthopedic shoes meeting the requirements of the norm EN ISO 20345.

In Europe it is spreading the use of orthopedic insoles in safety footwear providing people with foot problems more stable conditions, proper posture and a benefit to the whole body.

Mander-Malms GmbH is a German company specialized in the production of custom orthopedic insoles suitable for Giasco footwear.

Roofing

**IDROTECH®**

IDrotech® leather undergoes a special treatment that combines waterproofing and breathability, ensuring comfort in all seasons and protection from external elements. This technology allows work shoes to keep the foot dry without sacrificing internal ventilation, making them ideal for outdoor environments and variable conditions.

**KRONOS®**

Kronos® Fabric is an innovative combination of high-tenacity fabrics and special polyurethane (PU) yarns that provides safety footwear with high abrasion resistance while maintaining a technical and modern design. This technology ensures that shoes remain lightweight and breathable, offering comfort and protection throughout the working day.

**WINTHERM®**

Wintherm® technology combines two systems to provide protection from the cold without sacrificing comfort. The felt layer traps air inside the shoe, creating a natural insulating barrier. At the same time, the aluminum layer reflects the foot's heat back into the shoe, maintaining a stable temperature and reducing thermal loss even in extreme working conditions.

**MICROTECH**

Microtech is a polyamide techno-fiber with a suede effect, designed to give structure and body to the shoe while maintaining a soft touch. It combines water repellency, abrasion resistance, and breathability, making the shoe lightweight yet durable over time. Thanks to these features, it is ideal for work footwear requiring consistent performance and everyday comfort.

**ZERO ABRASION**

Zero Abrasion technology uses leather finished with a polyurethane multi-layer to protect the upper from scratches, cuts, and wear. This solution ensures that the footwear maintains performance and appearance even after months of heavy use, providing advanced resistance against abrasive surfaces and mechanical environments—all while preserving comfort and foot breathability. Additionally, this surface finish protects the shoe from aggressive substances such as acids, hydrocarbons, bodily fluids, construction materials, and more.

**WINDTEX®**

The Windtex® membrane is a technology designed to block water and wind. Lightweight and flexible, it ensures comfort and protection throughout the workday while maintaining a stable microclimate between skin and fabric. Thanks to its high breathability, it is ideal for breathable safety shoes that need to prevent overheating and excessive sweating, even in winter or during long shifts.

**PU TEK®**

PU Tek® Hypertex technology combines a polyurethane coating with a high-tenacity polyester core, creating a thin and flexible upper capable of withstanding very high levels of abrasion. This solution protects the shoe without adding weight, maintaining breathability and everyday comfort. The result is a technical work shoe that is lightweight, durable, and features a modern aesthetic.

**CLICK OPEN®**

The Click Open system allows the shoe to be put on and removed quickly thanks to a rotating knob that replaces traditional laces. The stainless steel wire running along the instep ensures an even and stable fit, improving both comfort and safety. Since the shoe cannot come undone, the risk of tripping is eliminated and internal friction is reduced, making it ideal for workers wearing gloves or who need to change shoes multiple times a day.

**METATARSAL PROTECTION**

Metatarsal protection is designed to absorb and distribute impact across the upper foot area, shielding the metatarsal bones from falling or heavy objects. It can be internal or external to the upper and is typically made from lightweight, durable materials such as polymer foams or TPU inserts, ensuring comfort without limiting mobility.

**ANKLE PROTECTION**

Ankle protection safeguards the ankle area from lateral impacts, twisting, and crushing injuries. Integrated into the shoe's structure—usually through padded reinforcements or protective shells—it provides anatomical support and enhances stability during uneven movements or work in demanding environments.
